Overview

ArtfulBits Bulk Check In is created to make check in task much easier. It allows checking an entire group of documents and changing their properties at one operation. Besides, it can be integrated into SharePoint Multiple Upload tool that makes it possible to use all *ArtfulBits Bulk Check In* features right after multiple documents are uploaded.

Feature List

Feature	SharePoint Server 2010	SharePoint Server 2013
Check in multiple documents	✓	✓
Upload and check in documents at the same time	✓	
Check in documents stored in subfolders	✓	✓

Support of custom document libraries	✓	✓
Support of standard SharePoint document versioning	✓	✓
Customizable per document library	✓	✓
Language pack support (desired localization can be added by request)	✓	✓

Why ArtfulBits Bulk Check In?

ArtfulBits Bulk Check In extends standard SharePoint Check In tools with several really useful things:

- Firstly, you can check in multiple documents from any library location in one operation, including those from folders and subfolders. Select or deselect documents or entire folders, browse library structure using interactive documents tree.
- Secondly, you can perform two tasks in one, editing document properties on check in. *ArtfulBits Bulk Check In* provides you with different edit options like overwrite existing column value, fill in if blank or ignore.
- Finally, *ArtfulBits Bulk Check In* is integrated into SharePoint Multiple Upload dialog. Therefore, you are able to use all its features when multiple files uploading.

How to Use

Configuration

In order to enable and configure **Bulk Check In feature** for Document library, go to **Library Settings** and select **Bulk Check In settings** link under **Permissions and Management** tab:

Settings page will appear.

In **Bulk Check In Features** section two features can be enabled or disabled. Enabling **Bulk Check In ribbon action** will make Bulk Check In button appears in the ribbon near the standard SharePoint check in buttons. Enabling **Bulk Check In on multiple upload** will make Bulk Check In appears after you uploaded multiple documents, so you will be able to check in and edit properties straight after uploading.

In **Document Properties** section you can change behavior for the *document properties editing section* of *Bulk Check In dialog*. If you need to edit document properties before check in, choose **Yes** for **Edit document properties** question. You will see a picker box appears, having all available document properties, where you can choose those you need to see in edit form and those you don't.

In **Documents Tree** section you can show or hide tree of all documents, folders, and subfolders in left panel of *Bulk Check In dialog*. This allows you to browse all documents in library and select or deselect them to be checked in. In order to show this tree, **Show Documents Tree** option should be enabled.

Click **Save** button to apply settings.

How to Use

To check in multiple documents inside document library, follow the steps:

1. Select documents you need to check in.
2. Click on Bulk Check In icon to open *Bulk Check In Dialog* ([click on the Files tab in document library ribbon](#)). Notice, that **Bulk Check In ribbon action** should be enabled for this library (See configuration section above).

Title

Overwrite Values

Choose if you want to overwrite every column value or only fill in empty columns

Overwrite existing column values

Fill in only empty columns

Retain Check Out

Other users will not see your changes until you check in. If you wish to continue editing, you can retain your check out after checking in.

Retain your check out after checking in?

Yes No

Comments

Describe what changed in this version

Comments:

To check in selected documents, press **Check In** button at the top or at the bottom of Bulk Check In dialog. In order to skip, press **Cancel**.

Before check in you can change several things.

Documents tree.

If **Documents Tree** option is enabled (See configuration section above) you will be able to see a list of all documents from the document library that are currently checked out, and, also, folder structure. All documents that are currently selected (have ticks near its title) will be affected by Bulk Check In operation. You can easily select or deselect document in any part of a library to be checked in. Notice, that:

- If a folder is selected, all checked out documents inside it will be affected.
- You can explore document library structure by expanding folders and subfolders inside the tree.

Edit Document properties

You can edit the properties (columns) of the documents that will be checked in. To assign some “value” to the document’s property just type it in the appropriate edit field. Notice, that:

- Initially, “value” will be assigned to the document only if an appropriate property is empty. You can change this behavior by setting **Overwrite column values** in the settings box above. Then all document properties will be overwritten with new “values” (if an appropriate edit field is enabled).
- Uncheck the checkbox near edit field to ignore it.
- Required fields are marked with red asterisk, cannot be unchecked and must be filled.
- All values inside edit fields will be validated, so you will not be able to check in anything until all values are correct.

Note: It is possible to hide either some properties of *document’s properties editing* or the whole thing (See configuration section above).

Edit Document Properties	
<input checked="" type="checkbox"/>	
<input checked="" type="checkbox"/> Title	<input type="text"/>
<input checked="" type="checkbox"/> Person	<input type="text" value="User"/>
<input checked="" type="checkbox"/> Number3 *	<input type="text" value="1"/>
<input checked="" type="checkbox"/> Number	<input type="text" value="2"/>
<input checked="" type="checkbox"/> Number2	<input type="text" value="3"/>
Overwrite Values Choose if you want to overwrite every column value or only fill in empty columns	
<input type="radio"/> Overwrite existing column values <input checked="" type="radio"/> Fill in only empty columns	

Check in section

In this section you can find some standard SharePoint check in options.

Retain Check Out: The default value is **No**, which means that documents will just be checked in. If you want to check in your documents, but continue editing, you can set this option to **Yes**. Documents will be checked in and checked out again.

Version: Select what document version to create (minor, major, or overwrite current minor). This section will be shown if library versioning settings are switched on.

Comment: Don't forget to describe changes in this version of documents.

Retain Check Out Other users will not see your changes until you check in. If you wish to continue editing, you can retain your check out after checking in.	Retain your check out after checking in? <input type="radio"/> Yes <input checked="" type="radio"/> No
Version Select the type of version to create on check in.	What kind of version would you like to check in? <input checked="" type="radio"/> Minor version (draft) <input type="radio"/> Major version (publish) <input type="radio"/> Overwrite the current minor version
Comments Describe what changed in this version	Comments: <input type="text" value="New Version"/>

If **Bulk Check In on multiple upload** option is enabled, then *Bulk check In dialog* will automatically be displayed after documents are uploaded.

After clicking **Done**, *Bulk check In dialog* will be opened with new documents automatically selected.

You can click **Check In** to check them in right now, or change any option described above first and then click **Check in**.

Note: SharePoint multiple upload works only in Internet Explorer, so this Bulk Check In feature will be unavailable in other browsers.

Release Notes

Version	Notes
v1.0 (March 18, 2013)	Initial Release

See Also

[ArtfulBits Blog](#)

Professional Blog complements and extends SharePoint default functionality with the possibility of adding video or zoomable image and preview, providing tags for the blog entries, supporting the categorization and tags cloud, filtering the entries by category or tag, configurable global settings and many more.
